- **Trophic networks of forested headwater streams. Ecosystems responses to global change.** *Principal Investigator:* Liliana García Lago. *Supervisors:* Isabel Pardo (Vigo, SPAIN), John Richardson (Vancouver, CANADA) & Wyatt Cross (Montana, USA). I am currently investigating the multiple global changes affecting the Earth's biogeochemical cycles and ecosystems, driven largely by human activities (alterations to climate, nutrient cycles and biodiversity, global intensification of agriculture) to understand how trophic interactions affect community dynamics and ecosystem functioning in aquatic ecosystems.
- **CELLDEX – CELLulose Decomposition EXperiment in streams and riparian zones across the Earth's major biomes.** *Principal Investigator:* Scott Tiegs. Research goals: (1) Compare organic-matter decomposition in the streams and riparian zones of the Earth's major biomes using a standard assay. (2) Quantify the changes in the nutrient content and stoichiometry of the cellulose fabric that may occur during decomposition across biomes. (3) Establish global baseline data to track changes to this fundamental ecosystem process in riverine habitats in the context of environmental change.
